COMPARATIVE ANALYSIS OF TUBERCULOSIS INCIDENCE: UNITED STATES VS INDONESIA (2000–2024)

Data source: Our World in Data (WHO estimates)
Tool: Microsoft Excel
Indicator: Estimated TB incidence per 100,000 population

DATASET

- Countries: United States and Indonesia
- Period: 2000–2024
- Total observations: 50
- Observations per country: 25

KEY RESULTS

Measure	United States	Indonesia
Incidence in 2000	7.70	370
Incidence in 2024	3.20	382
Absolute change	−4.50	+12
Percentage change	−58.44%	+3.24%
Overall trend	Decrease	Increase

KEY INSIGHTS

- **United States:** TB incidence decreased by approximately 58.44%, from 7.70 in 2000 to about 3.20 in 2024.

- **Indonesia:** TB incidence increased by approximately 3.24%, from 370 in 2000 to about 382 in 2024.
- Indonesia recorded substantially higher TB incidence than the United States throughout the comparison.

PUBLIC HEALTH INTERPRETATION

The results show contrasting TB incidence trends. The United States recorded a substantial reduction, while Indonesia experienced a slight increase over the 25-year period.

METHOD

Data filtering, organization, SUMIFS, percentage change calculation and line-chart visualization were performed using Microsoft Excel.

LIMITATION

This is a descriptive analysis of estimated incidence rates. It does not establish the causes of the observed trends.
